HOSPITAL CARDIOVASCULAR AI IMAGING CENTER

Epicardial & Pericoronary Fat AI Quantification Report

Automated 3D WholeBody SegResNet & CRISP-CT Coronary Inflammation Analysis

Patient ID: 0909
Exam Date: 2026-10-29
Modality: Cardiac CT (CCTA)

LOW RISK

CRISP-CT Vascular Inflammation & Fat Burden: Normal (~38th %ile)

Threshold: PVAT > -70.1 HU indicates active inflammation.

EPICARDIAL ADIPOSE TISSUE (EAT)

Total EAT Volume: 77.1 cm³

Mean Attenuation: -78.6 HU

Chamber Sub-Compartments:

- Left Ventricle (LV): 21.6 cm³
- Right Ventricle (RV): 19.9 cm³
- Left Atrium (LA): 22.0 cm³
- Right Atrium (RA): 13.6 cm³

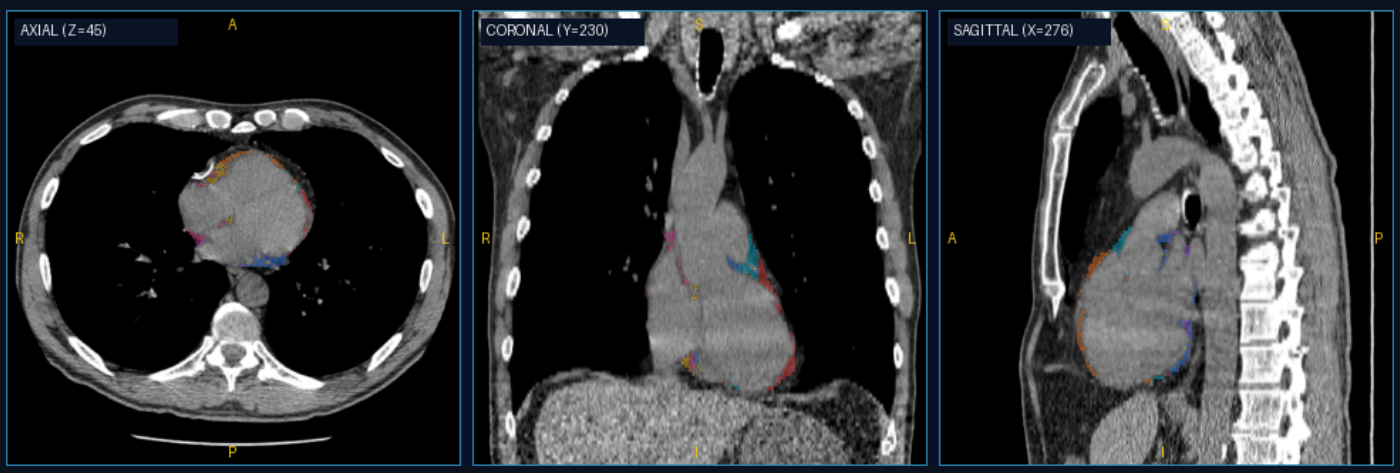

PERICORONARY ADIPOSE TISSUE (PVAT)

LAD PVAT:	9.4 cm³	-82.2 HU	Normal
LCX PVAT:	17.1 cm³	-82.8 HU	Normal
RCA PVAT:	8.9 cm³	-74.0 HU	Normal

Total Pericoronary Fat Volume: 30.4 cm³

3-VIEW ORTHOGONAL MULTI-PLANAR RECONSTRUCTION (MPR) WITH AI OVERLAYS

Axial (Z), Coronal (Y), and Sagittal (X) cardiac planes with 8-compartment adipose masks

STRUCTURED CLINICAL IMPRESSION (READY FOR EHR / POWERSCRIBE):

```
QUANTITATIVE CARDIAC ADIPOSE & INFLAMMATION AI ANALYSIS:
- Overall Biomarker Triage: LOW RISK
- Total Epicardial Fat (EAT) Volume: 77.1 cm3 (Normal burden, ~38th %ile)
- Total EAT Mean Attenuation: -78.6 HU
- Pericoronary Fat Attenuation (CRISP-CT active inflammation threshold: > -70.1 HU):
    * LAD PVAT: -82.2 HU - Normal Attenuation (· -70.1 HU)
    * LCX PVAT: -82.8 HU - Normal Attenuation (· -70.1 HU)
    * RCA PVAT: -74.0 HU - Normal Attenuation (· -70.1 HU)
IMPRESSION: Total Epicardial Adipose Tissue (EAT) volume is 77.1 cm³ (Normal burden, ~38th percentile), with mean attenuation
```
