HOSPITAL CARDIOVASCULAR AI IMAGING CENTER

Epicardial & Pericoronary Fat AI Quantification Report

Automated 3D WholeBody SegResNet & CRISP-CT Coronary Inflammation Analysis

Patient ID: 0987
Exam Date: 2026-10-29
Modality: Cardiac CT (CCTA)

LOW RISK

CRISP-CT Vascular Inflammation & Fat Burden: Normal (~25th %ile)

Threshold: PVAT > -70.1 HU indicates active inflammation.

EPICARDIAL ADIPOSE TISSUE (EAT)

Total EAT Volume: 51.7 cm³

Mean Attenuation: -72.9 HU

Chamber Sub-Compartments:

- Left Ventricle (LV): 10.5 cm³
- Right Ventricle (RV): 24.5 cm³
- Left Atrium (LA): 8.4 cm³
- Right Atrium (RA): 8.3 cm³

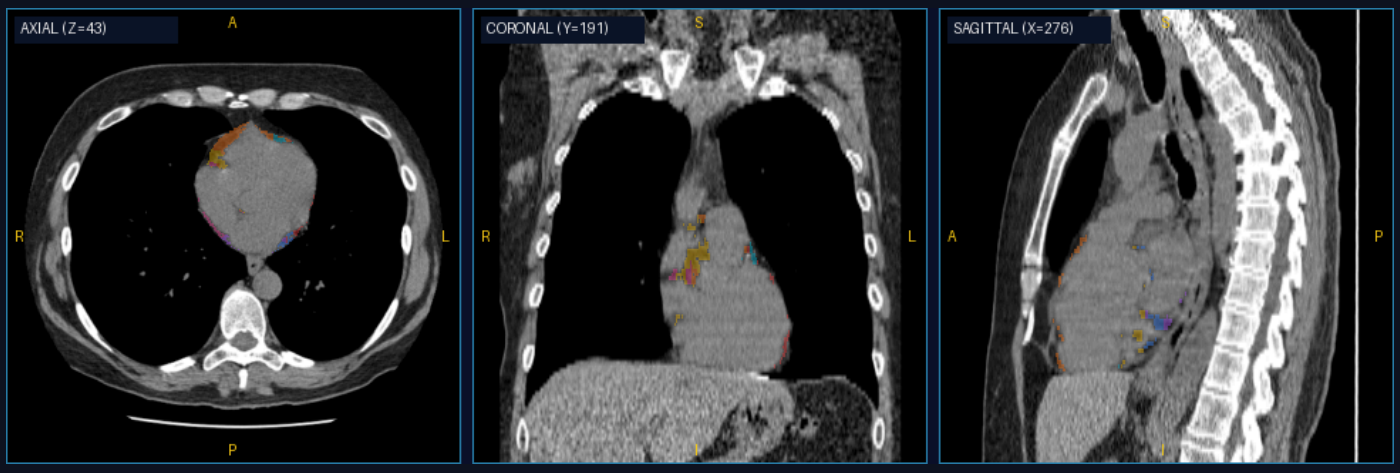

PERICORONARY ADIPOSE TISSUE (PVAT)

LAD PVAT:	5.6 cm³	-70.6 HU	Normal
LCX PVAT:	7.2 cm³	-72.3 HU	Normal
RCA PVAT:	9.2 cm³	-74.4 HU	Normal

Total Pericoronary Fat Volume: 20.3 cm³

3-VIEW ORTHOGONAL MULTI-PLANAR RECONSTRUCTION (MPR) WITH AI OVERLAYS

Axial (Z), Coronal (Y), and Sagittal (X) cardiac planes with 8-compartment adipose masks

STRUCTURED CLINICAL IMPRESSION (READY FOR EHR / POWERSCRIBE):

```
QUANTITATIVE CARDIAC ADIPOSE & INFLAMMATION AI ANALYSIS:
- Overall Biomarker Triage: LOW RISK
- Total Epicardial Fat (EAT) Volume: 51.7 cm3 (Normal burden, ~25th %ile)
- Total EAT Mean Attenuation: -72.9 HU
- Pericoronary Fat Attenuation (CRISP-CT active inflammation threshold: > -70.1 HU):
    * LAD PVAT: -70.6 HU - Normal Attenuation (· -70.1 HU)
    * LCX PVAT: -72.3 HU - Normal Attenuation (· -70.1 HU)
    * RCA PVAT: -74.4 HU - Normal Attenuation (· -70.1 HU)
IMPRESSION: Total Epicardial Adipose Tissue (EAT) volume is 51.7 cm³ (Normal burden, ~25th percentile), with mean attenuation
```
